WHY YOU'LL LOVE THE FREESTYLE 87L

The **Freestyle 87** is the board for dedicated foilers who want to foil even when the trees are trembling.

Whether jumping to new heights, or bringing it in hot for a landing you will be full of confidence with this nimble steed under your feet. The Freestyle 87 is our most progressive shape to date.

The super compact skim board outline can handle blasting wind speeds while giving you a direct-to-foil feeling with no noticeable swing weight. Big enough to get going in 5.0 conditions the Freestyle 87 is the choice for smaller maneuver oriented riders or anyone who plans to foil as when its windy enough for fun classic windsurfing. Like its bigger brother the

Freestyle 115 has both track mount and Tuttle box in the tail, allowing you to mount industry standard Tuttle foils along with the tunability of a sliding track mount.

REINFORCED FOIL TRACK AND TUTTLE BOX

Built tough to take all the force a foil can leverage. All the boxes are set into PVC block which is tied into the double T-Stringses providing I-Beam strength. The dual track and tuttle systems allow you to mount just about any foil and precisely place the center of lift for your riding style.

BIAX CARBON LAYUP

We start with an ultra light EPS foam core wrapped with higher density PVC foam. A PVC Carbon stringer runs down the middle of the boards, combined with glass wrapped T-Stringer to either side providing I-beam strength. Covered top and bottom with Biax Carbon.

LOGOSZ MADE LOGO

A blast from the past that is so rad.

TAIL AND RAIL CUTOUTS

Allow for early planing release when you are trying to break free of the water and onto the foil.

DEEP DOUBLE CONCAVE BOTTOM SHAPE

Displacing water on touchdown for smoother re-entry no matter how hot you are coming in.

FULL DECKPAD

Our Cushy EVA foam deckpad covers the whole tail of the board so no matter where your Hula dance takes you, your feet will be feeling fine!
